Kentucky Facilities Inventory and Classification System (KFICS) Phase I Report (REVISED)

IMPORTANT NOTE: A REVISED 2017 KFICS Report was issued on December 4, 2017. The revised report supersedes and replaces the prior report dated November 13, 2017. A revision was necessary because of a human error in the original report that impacted data quality and affected school rankings. KDE and its vendor partner corrected the data problem and re-submitted the KFICS Report to the Legislative Research Commission on December 4, 2017.

Executive Summary

Under HB 303 (2016), the Kentucky Department of Education (KDE) implemented a new cost-effective facilities assessment system – one that can be updated, maintained and is objective.

This report represents the first phase of a project that, once fully implemented, will contain a continuously updated condition database for approximately 1,700 school district facilities.

The Kentucky Facilities Inventory and Classification System (KFICS) Phase I Report reflects the initial training of Kentucky School districts on how to use the new system, the results of a pilot of the new facilities assessment system, and the quality control and quality assurance of the assessment results.

The report includes evaluations and rankings for 169 school facilities (one from each participating district and the Kentucky School for the Blind and the Kentucky School for the Deaf) or roughly 10 percent of all school district facilities.

Table 1: High-Level findings from physical condition assessment process

Description	Findings
Number of Schools Completed (One Per District)	169
Number of Schools less than 30-years old	26
Gross Area of Schools Completed	13,416,919 SF
Average Age	55 years (i.e., 1963)
Total Renewal Costs (2021)	\$1,086,274,147
Projected Replacement Values	\$3,260,351,641
Condition Index (2021)	66.68%

Because this report represents only Phase I of an ongoing project and includes limited data, the Kentucky Department of Education (KDE) does not recommend that the General Assembly rely solely on the 2017 Kentucky Facilities Inventory and Classification System (KFICS) Report to make funding decisions related to school construction and renovation projects.

After it is fully implemented, all school facilities will be included in a dynamic database that updates condition information as new construction, renovation and repair projects are completed. The system will make near real-time statewide building condition information available.

Background

The 2016 Executive Branch Biennial Budget (HB 303) provided an appropriation to KDE to develop a maintainable and updateable process to assess the physical quality and condition of K-12 public school buildings and to provide the Legislative Research Commission with a list of school buildings evaluated by the process.

The eligible buildings included for evaluation were:

- (A1) principal led public schools;
- (A2) career technology centers;
- (A3) special education programs;
- (A4) preschool programs;
- (A5) alternative programs;
- (A6) programs serving state agency children;
- (C2) area technology centers; and
- (D1) the Kentucky School for the Blind and the School for the Deaf.

On April 27, 2017, after two rounds of Requests for Proposals, the Kentucky Department of Education entered into an agreement with Ameresco for the Kentucky Facilities Inventory and Classification System Project. To accomplish the statutory requirement and create the attached KFICS 2017 List, KDE partnered with Ameresco for the use of its proprietary building assessment software tool suite, AssetPlanner.

The agreement between KDE and Ameresco takes a multiphase approach that, when fully implemented, will result in a database of all school facilities that is continuously updated as facility construction, renovation and repair projects are completed.

The goal of Phase I was to implement the software-based assessment system, train districts on how to use the system's mobile application and complete an initial condition assessment for one school building per district. The results of the condition assessment would then be assembled into the inaugural KFICS Phase I Report and provided to the Legislative Research Commission under HB 303.

The new phased system differs from the last statewide school building condition assessment (2011 Parsons Report) in that, after it is fully implemented, all school facilities will be included in a dynamic database that updates condition information as new construction, renovation and repair projects are completed. The system will make near real-time statewide building condition information available. In contrast, the 2011 Parsons Report was a one-time static report that evaluated 468 schools. That information is now six-years-old and outdated.

To produce the KFICS Phase I Report, KDE and its vendor Ameresco completed the following steps:

- Entered into a contractual agreement on April 27, 2017, to produce an initial KFICS Phase I Report by October 2017;
- Developed and refined templates for life cycle modeling with facility replacement values provided by KDE per school facility regulations;
- Developed an Assessment Guide to assist school district staff in carrying out independent on-site assessments and capturing essential facility data;
- Configured the AssetPlanner database with customizations to capture school building data;
- Developed a training program to enable school district staff and architects to conduct their on-site facility assessments using the mobile application tool. The training program was delivered to 171 district participants and 74 architects/contractors through 12 sessions;
- Established a dedicated support number to assist the assessors as questions arose;
- Implemented a Quality Assurance/Quality Control (QA/QC) process to maximize consistency and quality of the data within the available timeframe. Assessors were coached on how to address mandatory issues due to their impact on funding models, whereas Ameresco performed global adjustments to standardize the data; and
- Produced the KFICS Phase I Report based on the defined scoring methodology and the data provided by the district assessors.

Methodology

For Phase I, KDE invited all districts and the Kentucky School for the Blind and the School for the Deaf to participate. KDE and Ameresco provided 12 trainings across the state for school representatives on how to use the new assessment system.

To pilot the system, KDE recommended that each district assess its permanent facility in the worst condition. While not all districts evaluated their worst condition permanent facility, most complied with KDE's request. A "permanent" facility is a functional school that districts can expend funds to upgrade and repair. In contrast, a "transitional" facility is a school building the district has identified for closure. A district can only spend funds on a transitional facility for health and safety reasons.

The distinction between permanent and transitional facilities is important, because, **while the KFICS Phase I Report contains poor condition permanent buildings, there may be other district transitional facilities in worse condition, in need of replacement and not included on the list.** A district with such a transitional facility may or may not be able to fund a replacement building.

It should be noted that there are approximately 1,700 school facilities in Kentucky. The inaugural KFICS Report contains only 10 percent of the total school facility inventory. Because only one school per district was assessed and not all of the 173 districts completed an evaluation, the KFICS Phase I Report ranks 169 facilities. Six districts did not complete an assessment by the August 31, 2017, deadline.

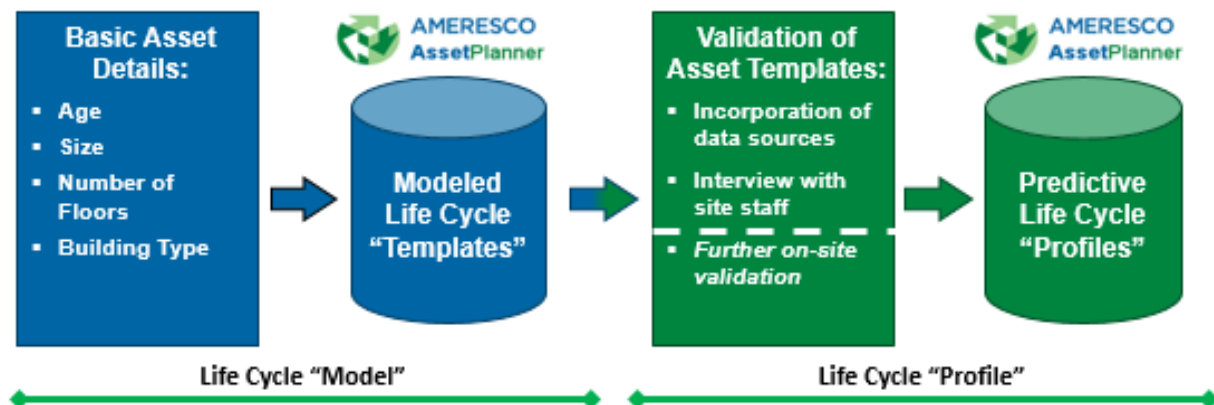

The KDE District Facilities Branch and Ameresco utilized district building data, including building age, the number of floors, sections and building type, to develop life-cycle cost models for each building. The models contained a listing of building component inventory based on the various asset types and established the order of magnitude of replacement costs and renewal timelines for each major building component. Each model included architectural, mechanical, and electrical components and systems. Based on the age of the component, predictive life cycle modeling costs and timelines were established. In the most basic terms, each evaluated school facility is assigned a Condition Index (CI) score, using objective industry-standards that include the cost of repairs and the replacement of systems in the next four years versus the cost of the total replacement of the facility. The Condition Index shows whether it is more efficient to repair or replace systems or to replace the entire facility.

District personnel, along with local architects and engineers, participated in training sessions during a 2-week period in summer 2017. The on-site building condition assessments started immediately following the training sessions. District personnel conducted 66 assessments while local architects or engineers conducted the assessments in the remaining districts.

Once the life cycle model templates were validated by the on-site assessments, Ameresco performed quality assurance and control checks to review the profiled data and flag gaps. The Quality Assurance/Quality Control process included incorporating funding assumptions for component renewal needs based on the condition assessment and life-cycle data. Assessors were guided to address mandatory issues (critical errors in the assessment data) due to their impact on funding models.

Ameresco next standardized the data utilizing a set of criteria to ensure compliance with the assessment guidelines. The costs were prioritized based on the Urgency of Action response provided by the assessor. Minor adjustments were made to data anomalies.

Figure 1: Data development process

NOTE: For Phase I of this project, only the Condition Index was included in determining the school score.

After finalizing the data, the 2017 KFICS List was generated based on school score.

Quality Assurance/Quality Control (QA/QC)

KDE understands the importance of capturing and reporting high-quality, accurate data for the KFICS.

The initial request for proposal for a vendor partner for the KFICS project included a requirement that the process incorporates quality control and quality assurance components, which was subsequently captured in the final contract.

As part of the Phase 1 inventory collection and assessments, Ameresco completed a QA/QC process to maximize consistency and quality within the timeframe for completing the initial assessments. Assessors were coached on how to address mandatory issues due to their impact on funding models, whereas Ameresco performed global adjustments to impact the remaining most critical issues.

Once KDE received the first draft report of completed reviews, KDE Facilities Branch architects reviewed the findings based on KDE information and their knowledge of the buildings, concentrating on those receiving the lowest and highest scores, to determine whether the information submitted for the buildings was accurate and representative of their status. The project manager ran subsequent testing to ensure data quality.

As the project progresses, the QA/QC process will become standardized and work in conformance with time periods usually established to ensure the highest quality of data on an ongoing basis.

In Phase II, and after that, additional on-site reviews will be conducted for further quality assurance measures on a sampling basis.

Phase II

Phase II of the KFICS project includes assessing the condition of a majority of the remaining school facilities, assessing facilities for educational suitability and implementation of additional software tools.

The software tool suite, AssetPlanner, allows KDE and school district personnel to capture building inventory data and condition assessments, model lifecycle needs, and strategize capital plans and funding needs. It allows for the integration of system-level building inventories with condition assessments, construction projects, and capital planning so that facility data can be easily maintained.

The AuditPlanner mobile application allows an assessor to capture objective building assessment data on a mobile device. The assessor can collect photographic evidence while inspecting the building during walk-throughs, efficiently documenting deficiencies and commenting on the repairs needed. An internet connection is not required until the audit data is ready for upload to the web-based modules.

The AssetPlanning Module provides a district with an asset register to easily manage and report on building inventories. The user can update building assessment data before publishing actions and costs collected during the on-site visit. It stores current and historical building assessment data for trending and comparative reports. Capital investment needs can be forecasted with different projections configured to determine how best to utilize the limited funding available to districts. Multiple reports are available for both district and state-wide tracking of facility needs.

The ProjectPlanning Module allows a district to create and manage facility capital plans, i.e., District Facility Plans (DFPs). Budgets and funding projections can be created while critical milestones are monitored. This module also integrates construction projects with inventories for updated lifecycle modeling.

Future reports will contain far more comprehensive data once additional eligible schools are assessed. A portion of the 1,700 buildings is ineligible for inclusion in the KFICS project because they are not classified as A1, A2, A3, A4, A5, A6, C2 or D1 facilities.

While not all school buildings will be included in future lists, all district buildings will be assessed for inclusion in District Facility Plans (DFPs). Districts are required to develop a local DFP every four years that must be approved by the Kentucky Board of Education under 702 KAR 4:180.

KDE welcomes the opportunity to demonstrate the capabilities of this new system to the legislature and other interested parties once additional data has been added. Additional data is necessary to make any presentation and analysis relevant and meaningful over time.

Next Steps

1. Expand assessments to include all Kentucky school buildings

Phase I provides a data-driven consistent view on the condition of 169 schools selected by districts as well as the Kentucky School for the Deaf and the School for the Blind. Most of the schools assessed are the poorest condition permanent facilities in a district. Assessing all 1,700 school buildings in Kentucky will quantify the state's renewal needs as well as the needs of individual districts.

Even though only certain classes of buildings are included in the KFICS List, under HB 303, all buildings will be evaluated and included in District Facility Plans (DFP). This analysis will allow districts to prepare informed annual facility budgets. It will also allow KDE to update the legislature with timely reporting for decision-making. The goal is to complete a

majority of the remaining assessments for all district buildings (all classifications as well as permanent and transitional facilities) within two years.

2. Continuous data management and annual refresh

KDE and districts through the facilities planning process will continuously update school building data and reflect ongoing improvements promptly.

3. Integrate district facility planning and construction into building inventories

KDE and Ameresco will implement a new DFP format that utilizes the inventory and assessment data. It will provide a breakdown by systems for easier tracking and updating of building data. Integration also will include connecting the construction projects (major renovations, room additions, and others) to the inventory for life cycle generation.

Appendix A: Description of fields within the Phase I Report

Item	Description
District Number	Unique district identification number.
District Name	Describes the name of the district as recognized by KDE.
School Number	School identification number unique within the district.
School Name	The name of the school as assigned by the district.
Footnote	<p>A reference to the explanation regarding the building.</p> <p>¹ Eligible for a major renovation means a building shall be a minimum of 30 years old or 30 years shall have passed since its last major renovation except restructuring an open space school for conventional classrooms. Exceptions are 15 years shall have passed for these systems: roof, HVAC, ADA, and life safety/security systems. (702 KAR 4:180)</p> <p>² Six districts did not complete a building assessment.</p>
Year Built	The year in which the school was built as provided by KDE and verified by the school district.
Number of Additions	Count of building additions that have been made to the school building.
Gross Area (Gross Square Footage)	The sum of the square footage of all areas on all floors of a building included within the outside faces of its exterior walls as provided by KDE and verified by the school district.
School SAAR Enrollment 2016-2017	The Superintendent's Annual Attendance (SAAR) school attendance data for the entire school year.
Capacity (from DFP)	The number of students that can be housed within the school – taken from the DFP.
Kentucky School Score	For this report, the School Score is equal to the Condition Index.

Item	Description
Condition Index (CI)	<p>Describes the physical condition of the building, including all building systems, based on national criteria. The reported value shown utilizes four years of repair and replacement costs as defined in the Total Budget Costs to Repair, aka Renewal Needs. The CI is reported as a “percent condition” on a scale of 0% to 100%, where the higher the CI, the better the condition of the asset.</p> $CI (\%) = 1 - \left(\frac{\text{Renewal Needs } (\$)}{\text{Current Replacement Value } (\$)} \right) * 100$
Costs to Repair Urgent Priority	The estimated capital costs to repair or replace systems or elements in the school building where the action cannot be deferred and is necessary to get element functioning again or avoid imminent failure.
Costs to Repair High Priority	The estimated capital costs to repair or replace systems or elements in the school building where the action cannot be deferred and will be necessary to ensure continued element functionality for the next 1-2 years.
Costs to Repair Medium Priority	The estimated capital costs to repair or replace systems or elements in the school building where the action can be deferred and will be necessary to ensure continued element functionality for the next 2-3 years.
Costs to Repair Low Priority	The estimated capital costs to repair or replace systems or elements in the school building where the action can be off to the years 3-4.
Total Budget Costs to Repair	The sum of all Urgent, High, Medium and Low Priority Costs to Repair up to and including year 4. This is also defined as the Renewal Needs value in the CI calculation.
Projected Budget to Replace	Projected Budget to Replace Current GSF, also known as the Current Replacement Value. The value represents the total cost of rebuilding or replacing an existing school with the same gross square footage and optimal state-of-the-art condition. The budget is established by KDE using $\frac{3}{4}$ of the industry standard RSMeans, adjusted annually.
Flood Plain	Identifies if the school is in the 100-year floodplain.
Last Assessment Completed	The date the last assessment was completed and published.

Appendix B: KFICS 2017 List – by School Scores (worst to best)

NOTE: Since this was a pilot, districts were instructed to include only one school. KDE suggested this be the permanent building in the worst condition. Not all districts chose to follow this suggestion, so there may be other district transitional facilities in worse condition, in need of replacement that are not included on the list.
